PRO / UV / LITE

Optics and illumination
for clinical observation.

Designed for skin examination.

SkinVue reflects our experience, offering a practical and convenient solution for medical professionals in daily clinical practice.

High-Intensity LED Illumination

Multiple LED light sources provide bright, uniform illumination, helping to reduce shadows and enable clearer observation of skin lesions.

Excellent Optical Performance

The large 114 mm aspheric lens provides a wide field of view for skin examination. The specially designed optical system and dedicated lens coating also reduce unwanted reflections, supporting clear and precise observation of skin lesions.

LCD Display & Electronic Control

The LCD display and intuitive electronic controls allow users to quickly check lighting settings and battery level and easily adjust the illumination, supporting smooth and efficient skin examinations.

Ergonomic Design & Convenient Operation

The device is ergonomically designed for comfortable and convenient use. Weighing approximately 400 g, it combines a lightweight body with a secure grip to reduce wrist strain and help users perform skin examinations comfortably.
